

AWS turi viską, ko reikia, kad būtų sukurtas

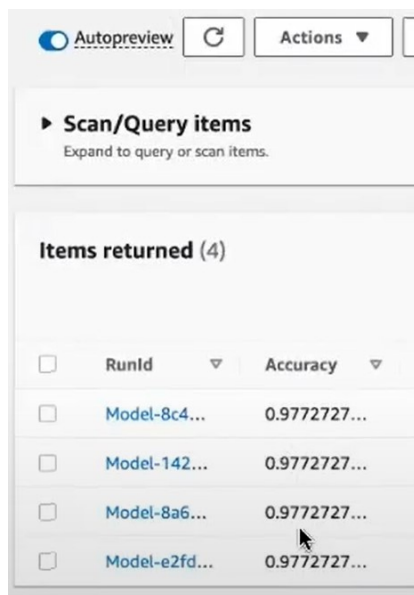

MLOps perkvalifikuoti 'tubeles'.

AWS turi debesų formavimo šablonus, kurie leidžia

sukurti visą 'vamzdyna' keliais paspaudimais nuo pradžios

iki pabaigos.

'tubeles' sukuria algoritmus.

The screenshot shows the AWS SageMaker console interface. At the top, there is a navigation bar with the 'Autopreview' toggle, a refresh button, and an 'Actions' dropdown menu. Below this, a section titled 'Scan/Query items' with the subtitle 'Expand to query or scan items.' is visible. The main content area displays 'Items returned (4)' and a table with two columns: 'RunId' and 'Accuracy'. Each row in the table has a checkbox on the left and a truncated RunId. All accuracy values are 0.9772727... A mouse cursor is hovering over the third row.

<input type="checkbox"/>	RunId	Accuracy
<input type="checkbox"/>	Model-8c4...	0.9772727...
<input type="checkbox"/>	Model-142...	0.9772727...
<input type="checkbox"/>	Model-8a6...	0.9772727...
<input type="checkbox"/>	Model-e2fd...	0.9772727...
